UNIVERSITY: Ageing and chronic disease
William Henry Duncan
L7 8TX
University of Liverpool
hlajens2@liverpool.ac.uk

RESEARCH SKILLS

- Expertise in proteomics and multi-omics approaches
- Research focus on extracellular matrix biology, including metalloproteinases and endocytosis
- Investigation of ageing mechanisms across tissues and species at the protein level
- Data analysis, visualisation, and bioinformatics using R, IPA, ClusterProfiler and DAVID
- Development of interactive data applications and dashboards using R Shiny, with front-end skills in HTML and CSS

ACADEMIC EXPERIENCE

2025 – 2027 Post-doctoral Researcher
University of Liverpool

2021 – 2025 PhD in Musculoskeletal Biology
University of Liverpool

2017 – 2021 Integrated masters (Biochemistry) (First Class)
University of Liverpool

2015 – 2017 A Level Chemistry (A), Biology (A), Physics (B) and Maths (C)
Grove College, Market Drayton

RESEARCH EXPERIENCE

2025 – 2027 Post-doctoral Research Position
University of Liverpool
Supervised by Professor Mandy Peffers
Project title: Development of an open-access Equine protein atlas
Project description: This project uses data-independent acquisition (DIA) proteomics across 22 equine tissues to develop an open-access protein atlas and R Shiny application for investigating age-related changes in the equine proteome.

2021 - 2025 PhD Thesis
University of Liverpool
Supervised by Dr Kazuhiro Yamamoto, Professor Mandy Peffers, Professor Fadi Jarad
Project title: Investigation of age-related differences within the extracellular matrix of dental tissues
Project description: This project aimed to characterise age-related changes in the extracellular matrix of dental tissues using proteomic techniques and identify biochemical differences associated with ageing.

2020-2021

Integrated Masters Research Project (73%)

University of Liverpool

Supervised by Dr Kazuhiro Yamamoto

Project title: The characterisation of endocytosis of newly identified ligands of LRP-1 (SPARC, WNT-5a and LIF)

Project description: The aim of this project was to deduce if extracellular components are LRP-1 ligands and observe whether their endocytosis occurs in an LRP-1 mediated manner.

2019-2020

Undergraduate Research project (68%)

University of Liverpool

Supervised by Professor David Fernig

Project title: Metal ion coordination of non-sulfated domains of heparan sulfate and the measurements of their interactions with FGF-2, using differential scanning fluorimetry.

Project description: This project investigated metal ion coordination of non-sulfated heparan sulfate domains and their interactions with FGF-2 using differential scanning fluorimetry.

ADDITIONAL SKILLS

Laboratory techniques: Extensive experience in biochemical and proteomic techniques, including data-independent acquisition (DIA) mass spectrometry, protein extraction and purification, Western blotting, ion-exchange chromatography, spectroscopy, cell culture, immunohistochemistry, and histology.

Bioinformatics and data analysis: Proficient in statistical and bioinformatic analysis using R (RStudio) and associated packages, including development and maintenance of R packages for reproducible bioinformatics and proteomics workflows. Skilled in application development using R Shiny, with additional experience in HTML and CSS. Experienced with tools including BLAST, PyMOL, Modeller, ChemDraw, ImageJ, DIALIGN, PROCHECK, IPA, and Microsoft Office.

Presenting: Delivered research presentations in oral, poster, and public engagement formats at institutional and international conferences, including the British Society of Matrix Biology, International Association for Dental Research (New Orleans), and British Equine Veterinary Association. Invited to present postdoctoral research at the Hong Kong Jockey Club research conference.

Teaching Experience: Contributed to undergraduate teaching across multiple modules, including Experimental Skills in Current Biology and Advanced Biochemical Methods. Supervised undergraduate research projects, leading to student publications and conference presentations. Designed and delivered statistics and coding workshops in R, supporting both undergraduate and postgraduate student development in group settings and one-to-one support sessions

Writing: Published original research papers from MBiolSci, PhD, and postdoctoral research, as both first author and co-author contributing to data analysis and visualisation. Secured competitive research funding through grant applications from HorseTrust and the Hong Kong Jockey Club. Experienced in preparing and obtaining ethical approval for research studies across species.
